

Umami in Docker v1.11 2024-12-18

Umami is an open source, privacy-focused alternative to Google Analytics

Umami site: <https://umami.is>

Umami repository: <https://github.com/umami-software/umami>

Umami Analytics in Docker repository: <https://github.com/GSCloud/umami>

Usage

Run **make**:

- **install** - install containers
- **start** - start containers
- **stop** - stop containers
- **test** - test containers
- **kill** - kill containers
- **remove** - remove containers
- **backup** - backup database
- **restore** - restore database
- **exec** - run interactive shell
- **exec run**=<command> - run <command> in shell
- **debug** - run interactively
- **config** - display configuration
- **logs** - display logs
- **purge** - delete persistent data
- **docs** - transpile documentation into PDF

URL: <http://localhost:3000>

login: **admin**

password: **umami**

Copy **.env-dist** to **.env** and modify the file according to your needs.

Examples

- **make purge install** - purge everything and fresh install
- **make backup test** - make backup and test
- **make purge restore** - purge everything and restore from backup

- `make logs` - show logs
- `make test` - test containers
