

# Umami in Docker v1.12 2026-01-09

## Umami is an open source, privacy-focused alternative to Google Analytics

Umami site: <https://umami.is>

Umami repository: <https://github.com/umami-software/umami>

Docker Umami Analytics repository: <https://github.com/GSCloud/umami>

Docker image: `docker.umami.is/umami-software/umami:postgresql-latest`

## Usage

Run **make**:

- **install** - install containers
- **start** - start containers
- **stop** - stop containers
- **test** - test containers
- **kill** - kill containers
- **remove** - remove containers
- **backup** - backup database
- **restore** - restore database
- **exec** - run interactive shell
- **exec run**=‘<command>’ - run <command> in shell
- **debug** - run interactively
- **config** - display configuration
- **logs** - display logs
- **purge** - delete persistent data ☐☐
- **docs** - transpile documentation into PDF

URL: <http://localhost:3000>

login: **admin**

password: **umami**

Copy **.env-dist** to **.env** and modify the file according to your needs.

## Examples

- **make purge install** - purge everything and fresh install
- **make backup test** - make backup and test

- `make purge restore` - purge everything and restore from backup
  - `make logs` - show logs
  - `make test` - test containers
-
