Umami in Docker and PostgreSQL v1.9 2024-11-20

Umami is an open source, privacy-focused alternative to Google Analytics

Umami site: https://umami.is
Umami repository: https://github.com/umami-software/umami
Umami Analytics in Docker repository: https://github.com/GSCloud/umami

Usage

Run `make`:

- install - install containers

- start - start containers

- stop - stop containers

- test - test containers

- kill - kill containers

- remove - remove containers

- backup - backup database

- restore - restore database

- exec - run shell inside container

- exec run='<command>' - run <command> inside container

- debug - install containers, run interactively

- config - display Docker compose configuration

- logs - display logs

- purge - delete persistent data 🔥🔥

- docs - transpile documentation into PDF

Copy `.env-dist` to `.env` and modify the file according to your needs.

Examples

- `make purge install` - purge everything and fresh install

- `make backup test` - make backup and test

- `make purge restore` - purge everything and restore from backup

- `make logs` - show logs

- `make test` - test containers
